

California Composite Wood Certification Program

The Professional Service Industries, Inc. (PSI) Formaldehyde Certification Program provides independent certification of formaldehyde emissions characteristic from urea-formaldehyde bonded products and other adhesive initial qualification, plant quality control procedures and periodic inspections by PSI and its subcontractors. This program is designed to assist the PSI clients in the certification of their products that meet the emission limits specified in the California Code of Regulations CCR Title 17 section 93120 (CARB Formaldehyde Regulation ATCM). It also meets the Department of Housing and Urban Development's (HUD) Manufactured Home Construction and Safety Standards, 24 C.F.R Part 3280 or other Voluntary Standards that exceed the HUD requirements. The specific details of emission limits, loading, air exchanges, variations in testing and distinctive marking applicable to this or any other applicable standard will be set forth from time to time in appendices to this program.
